NUTRITION TIP FROM THE KSC FITNESS CENTER: Keeping your heart healthy. When it comes to heart health, the messages of what to eat always revolve around fat. Is your eating plan keeping your heart healthy? **"Heart healthy"** eating means including whole grains, fruits and vegetables and choosing better sources of fat. Good fat choices include olive oil or canola oil, peanuts, walnuts, almonds or pecans. Plant fats have more unsaturated fat in them, and unsaturated fats help lower blood cholesterol. Animal fats — meat and dairy foods — are mainly saturated fats, the type of fat that increases cholesterol. In regards to heart health, these fats need to be monitored. Poultry and fish contain saturated and unsaturated fats, making them better choices than other meat or dairy, but they also need to be limited. For heart health, consume more plant-based foods and contact a dietetics professional. Source: <http://www.eatright.org/erm/erm091602.html>. <mailto:orrindl@kscems.ksc.nasa.gov>. (TA-C2)
